

Alyanna Mickaela B. Olviga

Data Analyst

0918 467 4622 | olviga.am@gmail.com | www.linkedin.com/in/mckllvg/ | mickasa.netlify.app

RELEVANT SKILLS

Data & Analytics: Python (Pandas, NumPy, scikit-learn), SQL/PostgreSQL, Power BI, Jupyter Notebook, Excel/Google Sheets

Development: Java, JavaScript, HTML, CSS, PHP, Laravel, Filament

Tools: Git/GitHub, Figma, VS Code, Canva, Microsoft Office Suite, Google Workspace

Domains: Data Analytics, Machine Learning, Natural Language Processing, Full-Stack Development, UI/UX Design

Soft Skills: Adaptability, Time Management, Collaboration, Organization, Communication

RELEVANT EXPERIENCE

MERALCO INDUSTRIAL ENGINEERING SERVICES CORPORATION

Pasig, Philippines

Software Engineer Intern

June 2025 - Aug 2025

- Analyzed existing SAP access request workflows across departments to identify bottlenecks in manual, email-based approvals, translating findings into requirements for a unified Laravel/Filament system.
- Built a centralized request-tracking system that reduced average approval turnaround, improving efficiency across cross-department approvals.
- Partnered with operations staff throughout development to validate workflow assumptions against real day-to-day usage.

PROJECTS

WakeUp Call: SLEEP HEALTH APNEA RISK PREDICTION USING LIGHTGBM

2025

WITH FEATURE ENGINEERING

- Led development of a mobile-based sleep apnea screening app, building a LightGBM model that achieved 98% accuracy from non-invasive inputs, with engineered features outperforming a baseline.
- Integrated three validated clinical questionnaires (STOP-BANG, Berlin, Epworth Sleepiness Scale) as structured inputs, increasing model reliability.
- Applied SHAP analysis to convert predictions into interpretable, personalized health recommendations.

SAP ACCESS REQUEST AND APPROVAL MANAGEMENT SYSTEM

2025

- Built a centralized web-based SAP request and approval system using Laravel, Filament, and MySQL, replacing fragmented Excel-based and manual email workflows with a unified digital platform.
- Streamlined the end-to-end request lifecycle through automated notifications, role-based access control, and real-time status tracking, improving efficiency across cross-department approvals.
- Enabled seamless request submission and monitoring via an intuitive interface, reducing process friction and enhancing accessibility for all stakeholders.

LSTorM: PREDICTIVE RESOURCE ALLOCATION FOR TYPHOON DISASTER RESPONSE

2024

USING LONG SHORT-TERM MEMORY (LSTM) IN DASMARINAS

- Built an LSTM model integrating real-time weather (OpenWeather API), demographic (PSA), and GIS data to forecast typhoon resource demand, achieving 92% prediction accuracy.
- Built a Streamlit dashboard for live monitoring and barangay-level prioritization, supporting allocation decisions across affected areas.

EDUCATION & ACCOMPLISHMENTS

DE LA SALLE UNIVERSITY - DASMARINAS

2022-2026

Bachelor of Science in Computer Science, Specialization in Intelligent Systems

GPA: 3.72/4.0

- Relevant Coursework:** Machine Learning, Data Structures and Algorithms, Object-Oriented Programming, Discrete Structures
- Awards:** Consistent Dean's Lister, Excellence in Student Leadership Awardee
- Leadership and Activities:** DLSU-D Computer Science Program Council – Public Relations Officer (Internal), Circle of Student Assistant
- Certifications:** TOEIC

LEADERSHIP AND ACTIVITIES

CODEYSSEY

Project Head

Nov – Dec 2024

- Planned and ran 2 monthly online coding challenges, engaging 10 student participants in algorithmic problem-solving.

ROBOTICS WORKSHOP

Program Officer

Nov 2024

- Organized and facilitated a hands-on robotics workshop for 40 participants using Arduino kits, enabling participants to apply programming and hardware concepts.
- Supported collaborative learning by guiding team-based problem-solving activities.
